	This report makes reference to the following document:		
	D3: DE 290 422 C (AUGUST RIEBE), 22 February 1916 (1916-02-22)		
	Document D3 is considered to constitute the prior art closest to the subject matter of claim 1 and discloses (the references in parentheses are to that document):		
	<p>a grinding tool comprising at least two detachably interconnected parts (1, 2) which form a body of the type of a grinding disk with a discontinuous peripheral grinding surface, one part (1) being firmly secured to a grinding spindle and the other part (2) being secured to the fixed part (1) in an adjustable or movable manner. The grinding tool also comprises an adjusting/moving unit (4, 5) arranged on the adjustable part (2), it being possible to adjust and fix the adjustable part (2) relatively to the fixed part (1) by means of the adjusting/moving unit (4, 5), so that the grinding width is adjustable while the level of the peripheral regions of the two parts (1, 2) remains the same.</p>

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement

The subject matter of claim 1 therefore differs from the known grinding tool in that

- i. it comprises a lining made of CBN or diamond grinding means,
- ii. at least three adjusting/moving units are peripherally arranged, at substantially the same angular distance from each other, and as far as possible in the radial direction from the centre towards the outer circumference of the grinding tool,
- iii. an outer centring flange is arranged radially outside the adjusting/moving units, between the fixed part and the adjustable part.

The subject matter of claim 1 is thus novel (PCT Article 33(2)).

Claims 2-9 are dependent on claim 1 and thus likewise meet the PCT novelty and inventive step requirements.
